LANGUAGES

- JavaScript, HTML/CSS
- Java
- Python

TOOLS

- WebStorm, Eclipse, VS Code
- ZenHub, Confluence
- NodeJS, Mocha, Chai.JS, Sinon.JS

EXPERIENCE

Elastic.io

Software Engineering Intern

Bonn, Germany

May 2019 – August 2019

- Increased Magento component usage by Implementing feature to create order invoices and to set orders as shipped in **Magento** using **JavaScript** and **Node.JS**
- Expanded test coverage of Filter component by adding support for **JSONata** expressions and added error assertion functionality in order to filter **JSON data**
- Pared down backlog by **10%** working on bugs, issues, and implementing new features as part of the sprint team
- Created unit and integration tests to ensure functionality of components using **Mocha's** testing framework, **Chai's** assertion library, and **Sinon.JS's** fakes
- Worked with **CircleCi** to confirm all test endpoints and HTTP Requests were functioning as intended
- Deployed multiple integration/data **pipelines** based on client criteria and incoming data

First Robotics

Team Captain

Mississauga, Canada

November 2016 – June 2018

- Led a team of 20 students made up of sub teams including Strategy, Mechanical, Electrical, Design, and Programming to the Ontario District Championship **placing 36 out of 156** in Ontario
- Mentored 12 junior members, setting them up to take on future **leadership** roles, out of which four went on to become team leads
- Modeled autonomous maneuvers for programming team to implement resulting in one of the most consistent autonomous modes across all teams with over a **95%** on target rate

PROJECTS

Write Up – write-up.netlify.com

- Built a notes app which utilizes **localStorage** for data persistence with **JavaScript**
- Implemented callback functions, arrays, and objects to control **DOM** and **JSON** elements

Second Guesser – second-guesser.netlify.com

- Developed a hangman game which leverages the **Fetch API** to make requests to an endpoint using **JavaScript**
- Utilized **async/await** to handle promise resolution/rejection, allowing code to run asynchronously

Meme-Survival – View on GitHub

- Created a birds-eye view shooter using the **libGDX** framework in **Java**
- Gained experience with the **SDLC** by iteratively testing my code and releasing Alpha, Beta, and Final versions
- Applied **Object-Oriented-Programming** principles such as encapsulation, abstraction, and inheritance to handle spawning hearts, enemies, and bullets

EDUCATION

University of Waterloo

Candidate for BASc in Management Engineering Class of 2023

Relevant Courses: Intro to Computer Programming (89%), Data Structures and Algorithms (TBD)
