SUMMARY OF QUALIFICATIONS

Languages: JavaScript, Java, Python, HTML/CSS, R, VBA

Tools: Node.js, React, React-Native, Firebase, Redux, WebdriverIO, Mocha.js, Sion.js, Chai.js, Junit

Project Management: Agile – Scrum, Jira, Confluence

EXPERIENCE

Manulife Financial

Software Engineering Intern

Waterloo, Canada

Jan 2020 – April 2020

- Worked with a team of 8 to deliver an automated investment tool for financial advisors using **React**, **Node.js**, and **Redux**
- Collaborated directly with the business team to translate business requirements into technical tasks
- Created regression tests using **WebdriverIO** for QA team; reducing 2 days of manual testing to less than 30 minutes of automated testing
- Demoed **InnerSource** product to senior leadership team, including VP of Core Engineering and Transformation, securing approval for internal rollout

Elastic.io

Software Engineering Intern

Bonn, Germany

May 2019 – Aug 2019

- Increased the Magento e-commerce platform component usage by implementing features to handle post purchase data in **Node.js**
- Added **JSONata** support and error assertion to existing Filter component making it simpler and easier to use
- Reduced backlog by **10%** over 4 months
- Created rigorous unit/integration tests using the **Mocha** testing framework, **Chai** assertions, and **Sinon.js** fakes

First Robotics

Team Captain

Mississauga, Canada

Nov 2016 – Jun 2018

- Led 20 students across 5 teams to place **36/156** in the Ontario District Championship
- Mentored 12 junior members and created development plans to successfully transition 4 of them to become team leads
- Modeled autonomous maneuvers for programming team to implement resulting in an autonomous mode with over a **95%** target accuracy

PROJECTS

Project X – Work in Progress

- Built a **React-Native** Android app that allows users to showcase projects with a simple and easy to use UI
- Integrated **Firebase authentication** to authenticate users to the app with their email and passwords
- Utilized **Cloud Firestore** as a database to track user info such as id's, usernames, projects, etc.
- Managed app state with **Redux**, allowing for data to be easily passed between components
- Developed features signup/login, profile and projects view, and adding projects functionality
- Planned features include search by username and a **chat system** to allow users to interact

Web Apps – Viewable on [GitHub](#)

- Developed notes, to-do list, and hangman web apps which utilize **localStorage** for data persistence and the **Fetch API** to make requests to an endpoint, using JavaScript
- Implemented callback functions, arrays, and objects to control **DOM** and **JSON** elements
- Utilized **async/await** to handle promise resolution/rejection, allowing code to run asynchronously

Meme-Survival – Viewable on [GitHub](#)

- Designed and developed a bird's-eye view shooter in **Java** using OOP best practices and **libGDX** framework
